

Mark43 Data Lake

Make the move to modern data storage

Public safety agencies often rely on multiple technology systems and collaborate with other organizations, requiring seamless data sharing from their RMS and CAD systems. Their ability to respond effectively often hinges on merging and analyzing information from disparate sources. Yet, extracting and integrating information from RMS and CAD data is a frustrating, time-consuming challenge that can delay critical operations and hinder their mission to protect communities.

The Mark43 Data Lake makes it easy for agencies to extract data from the Mark43 Public Safety Platform. Stored securely in the cloud, agencies and their third-party vendors can easily pull the vital information collected from Mark43 to the external source of their choosing.

KEY BENEFITS

• Effortless Data Access

Quickly and easily extract data from the Mark43 Data

Lake for use in your agency-specific applications or

with trusted third-party vendors.

- Enhanced Collaboration
 Seamlessly share data across teams, agencies, and organizations to drive joint strategic initiatives and improve outcomes.
- Uncompromising Data Security
 Hosted on AWS GovCloud with industry-leading security tailored for public safety, your data is protected with the highest standards.

MARK43 DATA LAKE FEATURES

- Store data in the cloud
 Retain all your Mark43 data in a secure cloud environment.
- Query and export data
 Extract your Mark43 data to a third-party or for analysis with internal agency applications.
- Partnerships with third-party vendors
 Mark43 has set up Data Lake access with over 100 vendors, making the process easy to build a connected ecosystem.
- Prebuilt SQL views
 Over 140 prebuilt SQL views to help you easily find and
 extract data with detailed schema documentation.
- Integrate with other tools
 Open, RESTful API gives you the tools to integrate with other applications and the Mark43 platform.

CUSTOMER HIGHLIGHT

Bethlehem Police Department (PA)

- Seamless data sharing strengthens regional investigations
 "We share a border with Allentown and Easton, and the
 surrounding area is home to nearly 1 million people. With
 a lot of movement between jurisdictions, being able to
 share reports and name profiles is hugely beneficial for
 investigations and crime detection."

 —Lieutenant Joshua Schnalzer
- Real-time data access delivers faster, smarter response
 "We have our own service center here with NCIC
 capabilities. They're able to get on the radio and provide
 real-time information to officers while they're on the scene.
 This data access has enhanced situational awareness,
 enabling officers to make faster, more informed decisions."
 –Chief Michelle Kott
